2024 DEBT AFFORDABILITY STUDY

Keeping Utah Fiscally Strong

MARLO M. OAKS

STATE TREASURER OF UTAH

Purpose

During the 2022 General Legislative Session, the legislature passed House Bill 82 – State Finance Review Commission, which established a new commission of State officials to review the borrowing and lending activities of the State, including State agencies and borrowing political subdivisions of the State. The bill also requires the Office of State Treasurer to publish an annual Debt Affordability Study on or before November 1 of each year.[1]

The Debt Affordability Study is intended to inform the legislature, investors, rating agencies, and Utahns, on the State's outstanding tax-supported debt obligations and debt practices, as well as the perspectives of the state treasurer on the prudent use of debt. It does not, however, constrain or compel policymakers in any way.

Scope

The Debt Affordability Study is limited to the tax-supported debt of the State and State agencies. This includes both General Obligation (GO) debt as well as lease-revenue bonds issued through the State Building Ownership Authority (SBOA). The study also contemplates long-term liabilities of the State, such as pension, Other Postemployment Benefit Plan (OPEB) obligations, and annual leave. It does not contemplate debt-incurring activities of local municipalities nor any affiliated bonding political subdivisions of the State, such as Point of the Mountain State Land Authority, Inland Port Authority, Utah Transit Authority, Utah Lake Authority, or the Military Installation Development Authority. Note, figures are generally rounded throughout the report.

MARLO M. OAKS

STATE TREASURER OF UTAH

November 1, 2024

Dear Fellow Utahns:

Utah has long been recognized for its strong public governance and prudent fiscal management. These qualities continue to shape our approach to financial stewardship and have helped to build a solid foundation for our state's future. The Debt Affordability Study is designed to provide an overview of our financial well-being, offering both state leaders and the public an accessible perspective on Utah's debt and credit position. Here are a few key highlights from this year's study:

- **Debt Levels:** Utah's debt stands at 14.4% of the Constitutional Debt Limit, marking at least a 35-year low in the State's relative debt levels as a percentage of allowable debt under the Constitution. *(See page 10)*
- **General Obligation (GO) Bond Authorizations:** There are currently $314 million in outstanding, statutory GO bond authorizations. However, projects specified within these authorizations received cash funding through legislative action in 2022 (SB6) and 2023 (HB6), with the exception of one project totaling $12 million. As a result, current authorizations for GO debt, with this minor exception, cannot be issued without further legislative action. *(See page 3)*
- **State Building Ownership Authority (SBOA):** The SBOA currently has no outstanding legislative authorizations for lease-revenue bonds. In September 2024, the state completed a refunding of four previously issued bond series totaling $90 million and new money bond transaction that provided bond proceeds of $16 million for the construction of two new DABC stores using the remaining authorizations. This effort resulted in savings of over $600,000 and reduced the risk of federal sequestration on outstanding bonds issued under the Build America Bonds (BABs) program. *(See page 3)*

While the state is well-positioned to borrow if necessary, several factors suggest that now may not be the most advantageous time:

1. **Elevated Borrowing Rates:** Interest rates are at their highest levels since 2007, increasing the cost of borrowing.
2. **Robust State Revenues:** Strong revenue streams reduce the immediate need for additional debt financing.
3. **Tight Labor Markets:** Labor market conditions could negatively impact the efficiency and cost of new projects.

The Office of State Treasurer is not aware of any current legislative plans to authorize new debt in the near future.

With this third study, I want to extend my sincere appreciation to our partners at the Governor's Office of Planning and Budget, the Utah Division of Finance, Utah Retirement Systems, State Auditor John Dougall, and Zions Public Finance. Their dedication, expertise, and commitment have made this study possible. This effort reflects Utah's collaborative approach to governance and underscores our state's enduring commitment to fiscal responsibility and transparency.

I encourage legislative and executive branch officers contemplating financing needs to contact my office. We are also available to address any questions regarding the State's credit rating and debt management.

Sincerely,

Marlo M. Oaks, CFA, CAIA
State Treasurer of Utah

TABLE OF CONTENTS

History of Utah's Credit Ratings

The General Obligation (GO) bonds of the State enjoy AAA/Aaa/AAA ratings from S&P Global Ratings (formerly Standard & Poor's Corporation), Moody's Investors Service, and Fitch Ratings, respectively. These are the highest credit ratings given, indicating the strongest financial position.

The oldest of these ratings is from S&P Global Ratings and dates to June 1965. At that time, S&P Global rated the State AAA without an outlook. In June 1991, S&P Global added an outlook of "stable" to its rating.

The rating from Moody's Investors Service came next and was first published in 1973. The State has always been rated Aaa by Moody's.

Utah became the first state in the nation to receive AAA ratings from three major rating agencies when Fitch Ratings first rated the state AAA in 1992.

Utah is one of only 15 states with triple-AAA ratings. **Utah has never been rated below AAA by any credit rating agency.**

Five other states have split ratings with at least one AAA rating from a major rating agency but with a lower rating from another rating agency. Only Missouri, North Carolina, Virginia, and Utah have maintained each of their AAA credit ratings since inception.

Table 1 shows S&P Global Ratings' history of each state with AAA ratings.

Importance of AAA Ratings

The State's strong credit saves taxpayers money through lower borrowing costs.

Utah's AAA ratings are a direct result of conservative fiscal policies, a diverse tax base and economy, limited use of State debt, and sufficient rainy day funds that are available to cover revenue shortfalls during economic downturns.

Utah's credit ratings reflect a track record of strong and proactive fiscal management that engages in a series of best practices.

*Data from S&P Global Ratings

BEST PRACTICES FOR AAA RATINGS

- Strong financial policies and practices
- Consensus revenue forecasts
- Procedures for reviewing and amending the budget based on updated information and actual performance
- Long-term capital planning
- Making well-grounded, accurate projections of both revenues and expenditures
- Quick budget action in response to reductions in revenues
- Effective adjustments to the State's pension and retirement systems to preserve their solvency

The State currently has outstanding approximately $1.4 billion of net tax-supported debt, which includes both GO debt and revenue bonds. **If debt had been issued with ratings just one notch lower, AA+ for GO bonds and AA for lease-revenue bonds, the cost to the State would be approximately $26.5 million in additional interest costs** over the life of the bonds, according to recent calculations by the State's municipal advisor, Zions Public Finance.

Utah's AAA ratings also reassure the public that governmental leaders are making wise financial decisions.

Factors In Utah's AAA Ratings

Rating agencies consider a broad range of factors when assessing a state's credit quality. Recent reports on rating methodologies of Moody's Investors Service, Fitch Ratings, and S&P Global Ratings indicate there are many commonalities in the factors used to assess a state's credit, including:

Economy. Rating agencies look at a state's demographic profile (is the state's population young and growing or older and stagnating), economic diversity (more industry sector diversity is better), wealth and income indicators, GDP growth trends, employment rates, and resilience of the economy through economic recessions.

Financial/Budgetary Performance. Rating agencies look for structural balance between revenues and expenditures, ability to respond to a recession, and the total amount and liquidity of fund balances, including rainy day funds.

Governance. Rating agencies look for evidence of prudent short and long-term fiscal planning, robust fiscal policies, and flexibility in revenue generation and expenditure management. Structural governmental or legal requirements for periodic reauthorization of existing revenue streams is a negative consideration.

Debt and Liability Profile. High ratings depend on conservative use of debt as assessed by the affordability ratios provided in this report. This includes debt service requirements, lower fixed costs as a percentage of revenues, and lower unfunded long-term liabilities, including pension and OPEB liabilities.

Generally, transactional market timing of interest rates is not recommended.

GO debt is the largest and most commonly used form of debt in Utah. However, there are other forms of debt the State may incur, including lease revenue bonds, which also impact the State's net-tax-supported debt calculation that rating agencies use in assessing the State's overall debt burden.

GO Bonds

Article XIV of the Utah Constitution sets forth the parameters for acceptable use of GO bonds. The State issues GO bonds to support large and infrequent infrastructure projects, including highway construction and the acquisition and construction of major capital facilities.

GO bonds are secured by the full faith and credit of the State by pledging to levy annual taxes on real and personal property if debt service cannot be fully paid by annual State appropriations.

As of November 1, 2024, the State's total GO debt burden is $1.2 billion, after a principal reduction payment of $366.8 million on July 1, 2024 (the first day of FY 2025). The State will make interest payments of almost $24 million on January 1, 2025 and July 1, 2025, along with a principal reduction payment of $255.3 million with the July 1, 2025 interest payment.

Utah's GO debt continues to amortize down with principal reduction payments dropping to $185.8 million in 2026 and $155.6 million in 2027.

GO Bond Authorizations

There are currently $314 million of outstanding, statutory GO bond authorizations. However, the projects specified in the statutory authorizations were appropriated cash funding through legislative action in 2022 SB6 and 2023 HB6, except for one project totaling $12 million. Consequently, current authorizations for GO debt, with this small exception, are unable to be issued without further legislative action to repurpose those authorizations.

SBOA Lease Revenue Bonds

The legislature created the State Building Ownership Authority (SBOA) in 1979 to finance the purchase and construction of facilities leased primarily to State agencies. These bonds are secured by the facilities that the SBOA owns, and the debt service on the bonds is paid from the lease revenues appropriated by the legislature to the agencies. State statute exempts the State from explicit liability for the debt issued by the SBOA (unlike the state's GO bonds).[2]

However, any default on the bonds would have an impact on the State's credit rating. **Because of the lesser credit pledge by the State relative to the State's GO bonds, lease-revenue bonds issued by the SBOA carry a credit rating of Aa1/AA+, one notch lower than the State's AAA-rated GO bonds.** Also, because the lease revenues come from appropriations made from General Funds, the SBOA lease revenue bonds are included in the calculation of "net tax-supported debt" along with GO debt. Net tax-supported debt is used in the calculation of several of the common debt burden ratios used to compare debt between states. The SBOA did not issue any new bonds in FY2024. As of June 30, 2024, the outstanding principal and interest for all SBOA lease-revenue bonds was $245 million.

SBOA Bond Authorizations

There are currently no outstanding legislative authorizations for new debt to be issued by the SBOA.

Recent Transaction

The Office of State Treasurer continues to monitor both GO and SBOA debt to find opportunities for refunding transactions that provide overall savings to the State. In September of 2024 the State completed a refunding and new money bond transaction that provided bond proceeds to fund the construction of two DABC stores using the only remaining authorizations.

In addition to the new money totaling $16.2 million, the transaction refunded four previously issued bond series totaling $89.5 million. The transaction was completed with savings of over $600,000 and reduced risk of further federal sequestration on the outstanding SBOA bonds issued under BABs.

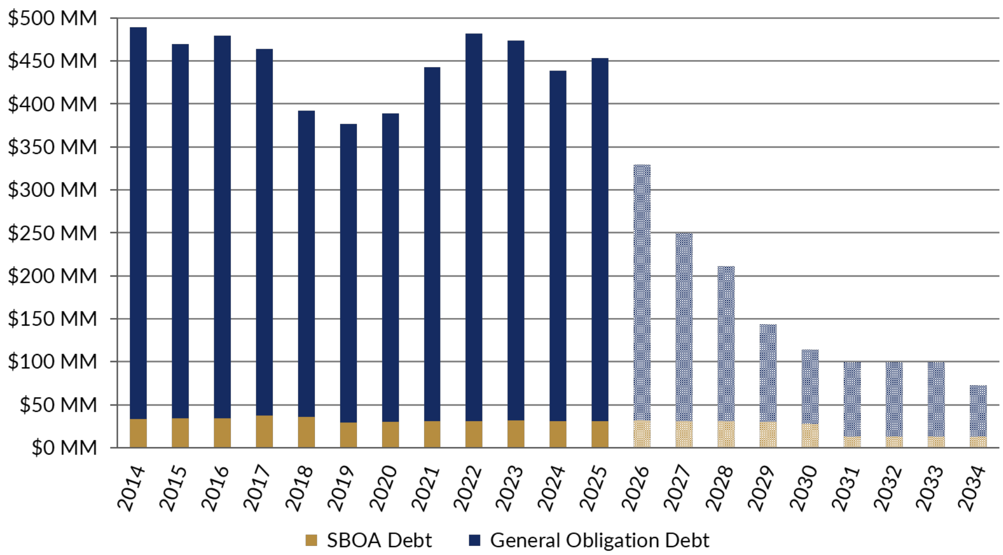
During 2018, 2019, and 2020, the State issued GO bonds each year to fund road construction and the construction of the new State prison facility. These additional bond issues kept total debt outstanding between $2.5 billion and $3.5 billion each year since 2015. No new GO debt has been issued since June 2020, allowing GO debt to fall to $1.2 billion in FY 2025.

Figure 1, below, shows the end of fiscal year total net tax-supported debt for Utah since 2014 with projections for the next four fiscal years.

Debt Service on Net Tax-Supported Debt

Debt service is paid on outstanding debt twice yearly. For GO debt, the payment dates are January 1 and July 1. For SBOA debt, the payment dates are May 15 and November 15. The January and November debt service payments are for interest only, and the July and May payments include both interest and principal payments.

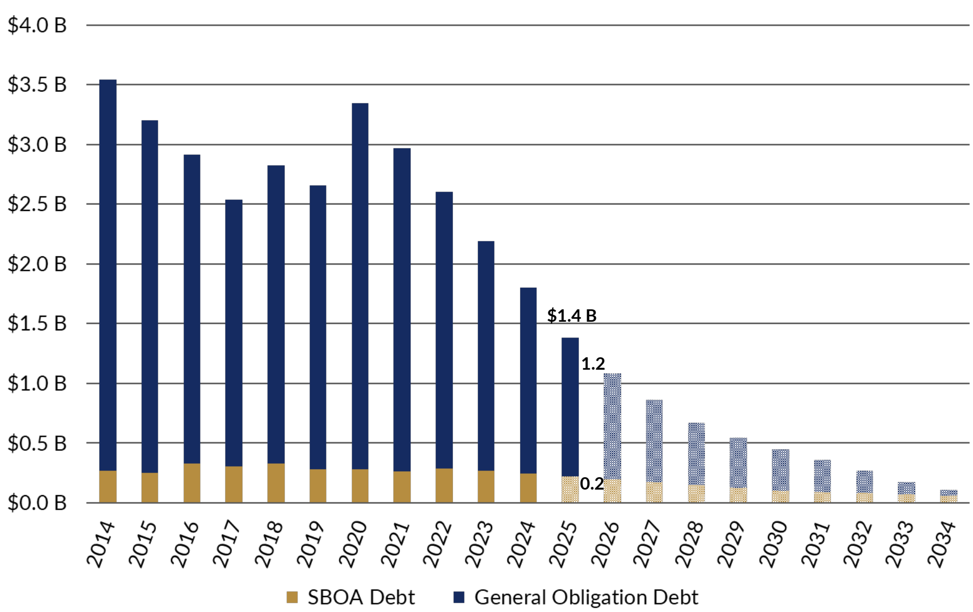
Figure 2. Annual Debt Service on Net Tax-Supported Debt (End of Fiscal Year)



The last payment for GO debt service was made on July 1, 2024 and is recorded as part of FY 2025 activity since that payment occurred on the first day of the new fiscal year. On July 1, 2024, the State paid $366.8 million in principal and $31.7 million in interest on the State's GO debt. The State paid $19.8 million in principal and $5.6 million in interest on May 15, 2024 for lease revenue debt.

Total debt service on net tax-supported debt has remained between $375 million and $500 million for the past 10 years. However, beginning in FY 2026, debt service drops below $200 million and continues to drop significantly over the next several years.

Figure 1. Net Tax-Supported Debt (End of Fiscal Year)



*The FY 2025 net tax-supported debt includes GO principal and premium of $1.2 B as of November 1, 2024, reflecting the $366.8 million principal payment on July 1, 2024, the first day of FY 2025.

Other State Debt Obligations

There are additional types of debt for which the State provides credit support including the School Bond Guaranty Program[3] and Charter School Credit Enhancement Program.[4]

In addition, the State Board of Higher Education issues debt for higher education and student loans, which carry a State "moral obligation" pledge similar to the debt issued by the State Building Ownership Authority.

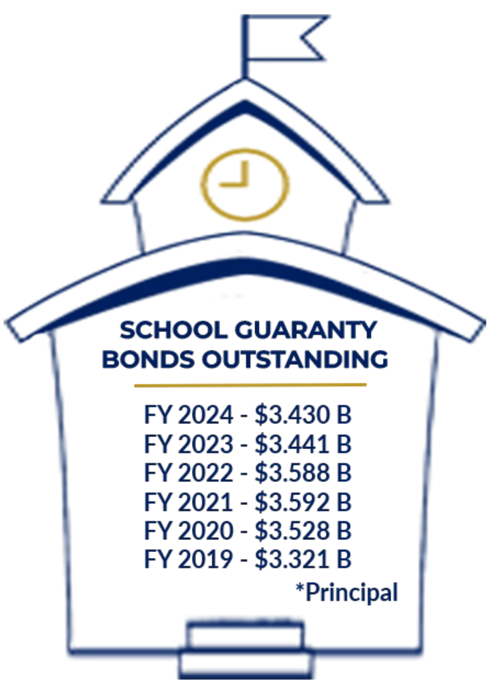
School Bond Guaranty Program

The Utah School Bond Guaranty Act[5] became law on January 1, 1997. This Act provides the State’s full faith, credit, and taxing power as credit enhancement to qualified local school districts issuing bonds. This decreases borrowing costs on the bonds. Qualified bonds issued by the districts carry a AAA rating, equal to that of the State, from each of the credit rating agencies.

Primary repayment of the bonds comes from revenues of the school district. However, if a school district is unable to make a debt service payment, the State is obligated to step in.

To date the State has not been required to make a debt service payment on behalf of a school district. If the State were required to step in, it could use available State funds, intercept payment to the district from the Uniform School Fund, or issue State GO bonds. Under such a scenario, the local school district would not be absolved of the debt obligation that the State paid.

Figure 3.



By the end of FY 2024, the program had grown to over $3.4 billion in outstanding bonds.

Moral Obligation Bonds

Each year, there are other revenue bonds issued by state-related entities listed in this section, for which the State also provides a “moral obligation” pledge. These bonds carry a provision that requires a State official to certify each year to the governor (by December 1) the amounts necessary to replenish any withdrawal made from the respective debt service reserve funds.

The legislature has the discretion to replenish these funds through appropriations from the General Fund or from other funding sources as outlined in State statutes. Each moral obligation program has its own authorizing authority consisting of a board appointed by the governor. The authority for each program must authorize each bonding transaction with a moral obligation pledge of the State.

Although there is no compulsory legal requirement for the legislature to fund shortfalls in moral obligation reserve accounts, the pledge constitutes a moral obligation of the State to replenish the reserve accounts that have been used to fund debt service of a participating entity failing to pay its debt service. If the legislature chose not to replenish a reserve fund that had been used, it would likely have a materially negative impact on the State’s credit rating and create higher borrowing costs for other entities participating in a moral obligation program.

In Utah, these moral obligation bonds receive a rating of AA or equivalent instead of AAA by each of the credit rating agencies. This two-notch discount reflects the marginally lesser quality of a moral obligation pledge relative to more explicit guarantees like those provided in the School Bond Guaranty Program.

Charter School Credit Enhancement Program

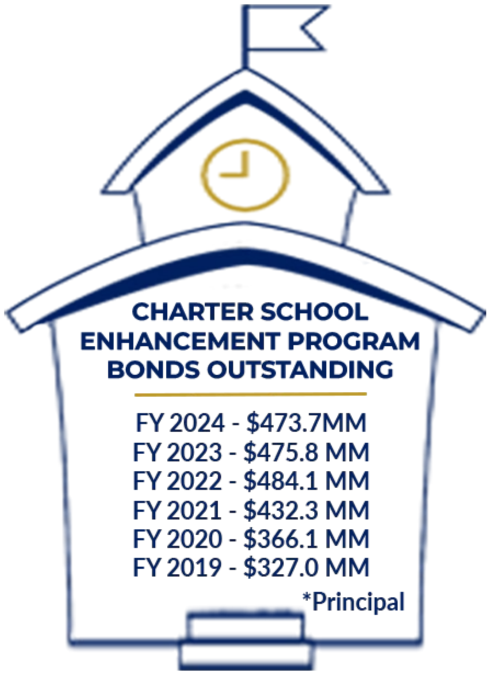
The Charter School Credit Enhancement Program was created to help reduce borrowing costs for qualifying charter schools by providing a moral obligation pledge of State backing for bonds issued through the State conduit (Utah Charter School Finance Authority) and supported by general revenues of each respective charter school.

Bonds issued under this program do not carry the explicit legal guaranty of the State like the School Bond Guaranty Program, but instead provide a moral obligation provision as described previously. In addition, participants in the Credit Enhancement Program are required to pay contributions into a debt service reserve fund.

This reserve serves as a source of funds should a school be unable to make their required debt service payment. The reserve fund currently carries a balance of $20.5 million.

If the account were depleted to make debt service payments for schools, the legislature would need to replenish the reserve account from General Fund appropriations. Under such a scenario, any offending charter school is required to repay the State the full amount of the appropriation for which they are responsible.[6] To date, no charter school has drawn on the debt service reserve fund to pay a debt service payment.

Figure 4.



The Credit Enhancement Program is administered by the Utah Charter School Finance Authority. The authority sets the standards that must be met in order to qualify to participate in the program. Thirty-two separate bond issues have received credit enhancement under the program since its formation in 2012.

Board of Higher Education

The Utah Board of Higher Education is an entity that may issue moral obligation bonds of the State on behalf of Utah higher education institutions to finance buildings, with loan repayment based on revenue pledged from the operation of the buildings and student fees.

As of June 30, 2024, the Board of Higher Education had approximately $2.6 billion in outstanding moral obligation bonds.[7]

Employee Pension[8]

The Utah Retirement Systems (URS) was established by Title 49 of the Utah Code. URS plans and programs are administered on an actuarial basis under the oversight of the Utah State Retirement Board (board). Six board members are appointed by the governor, and the state treasurer serves as an ex-officio board member. URS's audited financial statements are reported on a calendar year. The latest reporting period ended December 31, 2023.

The pension plans of the State are consistently recognized as some of the best-funded plans in the nation. In addition, URS uses relatively conservative return assumptions. URS reduced its assumed investment rate of return from 7.2% to 7.0% in 2017 and further reduced the investment assumption to 6.85% in 2021. The URS return assumption is below the median return assumption of 7.0%, and equal to the average return assumption of 6.85% of the 131 public pensions tracked by the National Association of State Retirement Administrators as of March 2024.

Even with this relatively conservative return assumption, URS was able to increase the Plan's Fiduciary Net Position as a percentage of Total Pension Liability (funding ratio) to 94.4% in 2023 (up from 94% in 2022). Rating agencies generally consider a funding ratio of above 80% to be sound for government pensions. The Pew Charitable Trust in September 2021 released a report titled, "The State Pension Funding Gap: Plans Have Stabilized in Wake of Pandemic." According to their report, URS ranked eighth among U.S. states in overall funded status.

The fund earned a return of 9.4% in 2023, growing by $3.2 billion to a new all-time high of $45.3 billion. The portfolio allocation is built with the intent to maximize long-term returns over market cycles, with an emphasis on downside protection.

While consideration for pension funding should always be paramount in the budgeting process, past legislative actions, including, significantly, the creation of the Tier 2 benefit plan in 2011, has resulted in curbing the increasing costs of the pension. URS receives no direct appropriation from the General Fund, and it is not anticipated that employer contribution rates paid by the State will increase in the foreseeable future.

Other Post-Employment Benefit Plans (OPEB)

The State administers two Other Post-Employment Benefit (OPEB) plans, the State Employee OPEB plan and the Elected Officials OPEB plan, with separate irrevocable trusts that provide post-employment health and insurance coverage to employees and elected officials who are eligible to receive post-employment health and life insurance coverage. The State Employee OPEB plan was closed to new entrants beginning January 1, 2006, while the Elected Official OPEB Plan was closed and only available to elected officials who began service prior to January 1, 2012 for healthcare coverage between ages 62 and 65 and July 1, 2013 for Medicare coverage at age 65.

The State has fully funded the actuarially determined contribution (ADC) for the State Employee OPEB Plan since the creation of the trust fund in FY 2008, except for a shortfall of $680,000 or 1.3% compared to the ADC of $53.9 million in FY 2008. The ADC for the Elected Official OPEB Plan has been fully funded since the creation of the trust fund in FY 2012. The ADC, as of the beginning of FY 2025, for the State Employee OPEB Plan and Elected Officials OPEB Plan is $12 million and $450,000, respectively, based upon the December 31, 2022 actuarial study for each plan.

The State Employee OPEB Plan Net OPEB asset reported on June 30, 2024 was $33.7 million consisting of an OPEB liability of $209.9 million and a Fiduciary Net Position of $243.7 million, or 116% funded. The Elected Official OPEB plan Net OPEB asset was $1.4 million as of June 30, 2024, with an OPEB Liability of $21.9 million and Fiduciary Net Position of $23.3 million or 107% funded.

Credit analysts and rating agencies look at four key ratios to measure a state's debt burden. These ratios allow for standardized comparisons between states as well as highlight noteworthy constraints to debt issuance. These ratios are:

1) **Debt Per Capita** (Net Tax-Supported Debt / State Population)[9]

2) **Debt as a Percent of Personal Income** (Net Tax-Supported Debt / Total Personal Income of the State's Population)[10]

3) **Debt as a Percent of State Gross Domestic Product** (Net Tax-Supported Debt / State Gross Domestic Product)[11]

4) Debt Service as a Percent of State Net Revenues (Annual Debt Service Requirement / Net Own-Sourced Revenues of the State)

When calculating the comparative ratios above, rating agencies use net-tax supported debt (NTSD) for the debt component of the ratio. NTSD is defined as debt secured by statewide taxes and other general resources, net of obligations that are self-supporting from pledged sources such as utility or local government revenues. For Utah, this includes all GO bonds issued by the State, as well as all lease revenue bonds issued by the SBOA.

Other forms of State guaranteed debt and moral obligation debt, including the State's School Bond Guaranty program, Utah Charter School Credit Enhancement Program, and other programs, are not included in the calculation.

Table 2 and Figures 5, 6, and 7 detail Utah's comparative position for the first three debt ratios relative to other states. For comparative purposes, it is most useful to compare Utah to other states with AAA ratings.

Comparative Debt Ratios

Utah ranks between 13th and 18th among all states in each of the debt ratios in Table 2.

When compared with all states, Utah is below national averages and medians for each of these key metrics, including debt per capita, debt to personal income, and debt to state GDP.

Compared to other AAA-rated states, Utah is higher than other states' medians but below peer averages.

Table 2. 2023 Comparison of Debt Ratios for AAA States (2022 in Parentheses)

State	Net Tax-Supported Debt per Capita	Ranking (All 50 States)	Net Tax-Supported Debt as a % of 2023 Personal Income	Ranking (All 50 States)	Net Tax-Supported Debt as a % of 2023 State GDP	Ranking (All 50 States)
Delaware	4,526	46	6.80%	47	4.80%	46
Maryland	2,952	41	3.90%	39	3.50%	41
Virginia	2,035	37	2.80%	33	2.50%	33

Indiana	356	7	0.60%	7	0.50%	6
Tennessee	271	3	0.40%	3	0.40%	3

Source: Moody's Investors Service[9]

It should be noted that the mean for the AAA-rated states is skewed significantly by Maryland and Delaware (not included in Figure 5, Figure 6, and Figure 7). Delaware issues all local debt at the state level and thus is not comparable to Utah. Without Maryland and Delaware, Utah would be higher than the mean. While relatively high for a AAA-rated state, the ratios indicate for a rapidly-growing state with subsequently high infrastructure development needs, Utah is managing overall debt levels adequately.

The State's practice of issuing its debt with short amortization schedules (generally not longer than 15 years, while other states will issue out to 30) has two key benefits: 1) it frees up significant debt capacity on an annual basis, and 2) it allows the State to take on additional sizable projects using debt without layering on to large absolute debt levels.

Debt Service Ratio

Because Utah generally issues debt with short amortization schedules relative to other states, its debt service as a percent of state net revenues is the debt burden ratio where Utah shows least favorable. Utah tends to have debt service ratios at close to the median level compared to all states and significantly higher that the median compared to its AAA peers. Short debt amortization is looked upon favorably by rating agencies and credit analysts, helps keep Utah's cost of borrowing relatively low, and maintains higher flexibly to issue future debt. However, it can also adversely impact budgets for ongoing State programs.

Figure 5. AAA-Rated States: Debt per Capita (Fiscal Year)

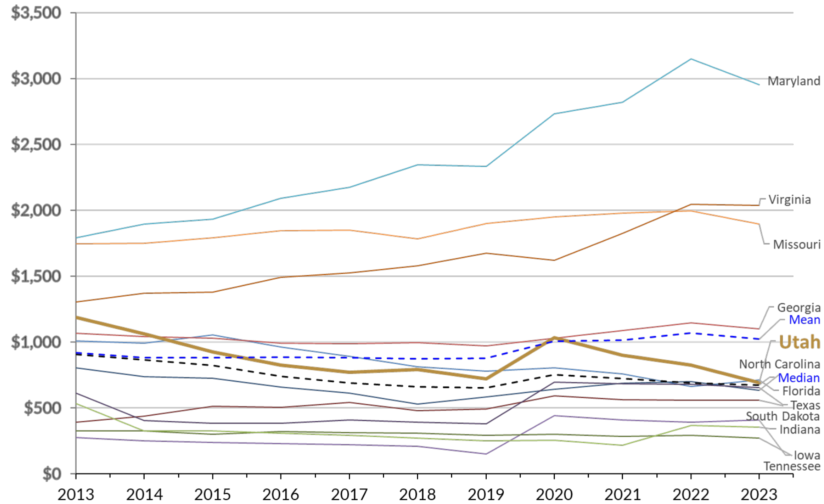

Figure 6. AAA-Rated States: Debt to Personal Income (Fiscal Year)

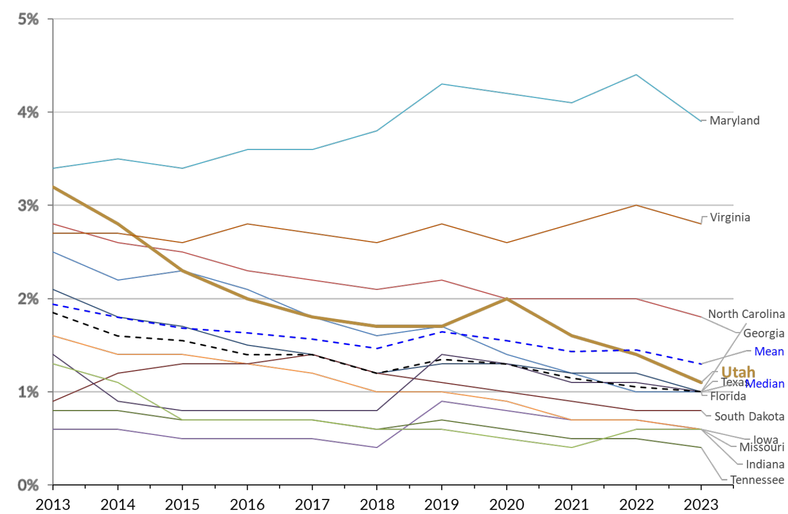

Figure 7. AAA-Rated States: Debt to GDP (Fiscal Year)

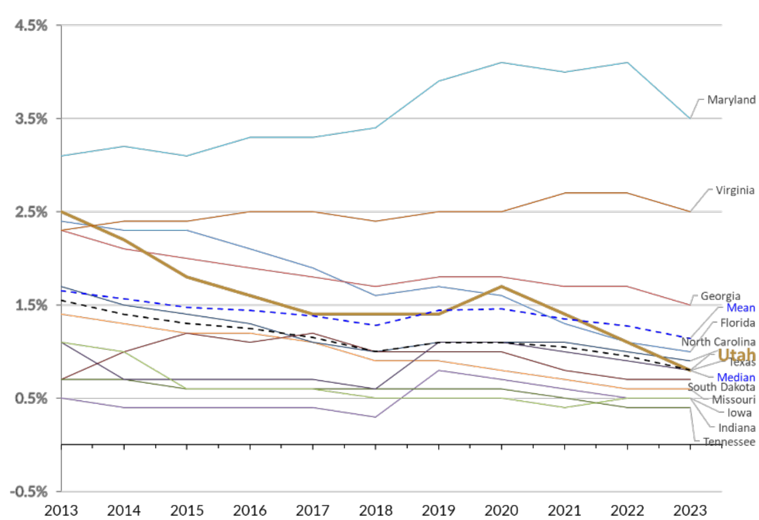


Source: Moody's Investors Service[12]

Article XIV, Section 1 or the Utah Constitution prohibits the issuance of new debt, even debt that has been previously legislatively authorized, if it causes the aggregate debt of the State to exceed 1.5% of the value of the State's total taxable property. Final property values from assessments made in 2023 put this limitation at $11.9 billion.[13]

Final property values are not available until approximately 14 months after each fiscal year end. As a result, official constitutional debt calculations use property values that are 14 to 26 months old.

The Constitutional Debt Limit applies to all GO debt of the State and may include unpaid State employee annual leave. The 1.5% limitation does not apply to self-supporting debt or revenue bonds of the State, such as those issued by the State Building Ownership Authority, nor does it apply to moral obligation pledges or debt guarantees as long as the debt is supported by revenues other than State funds.

Likewise, the Constitutional Debt Limit does not apply to long-term liabilities of the State, including employee pension and other post-employment benefits.

Unpaid State Employee Annual Leave

In 2017, after reviewing guidance issued by the attorney general, it was determined that Unpaid State Employee Annual Leave may qualify as constitutional debt. Until this matter is more fully explored by the attorney general, the treasurer and auditor have determined to include these liabilities when calculating constitutional debt. As of the end of FY 2024, this liability totaled $153.6 million.

Historical Debt Levels and Strategic Use of Debt

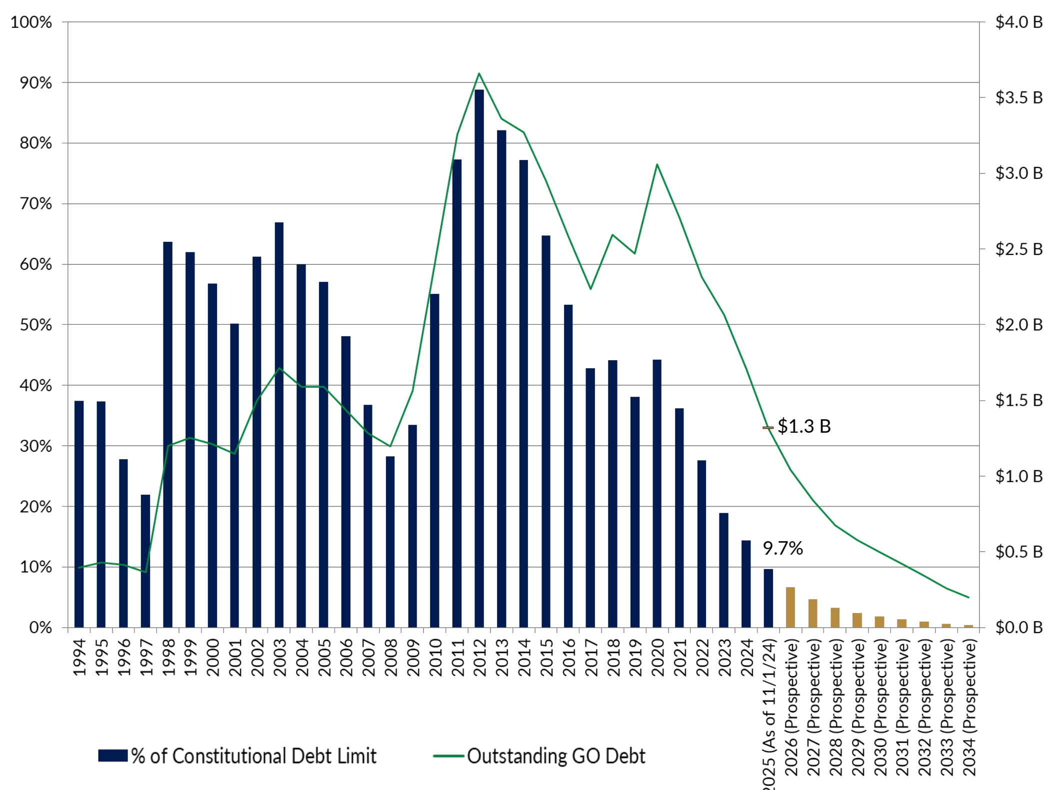
Figure 8 shows the historical and projected GO debt of the State both in total (green line) and as a percentage of the Constitutional Debt Limit (bars).

Figure 8 illustrates that, historically, Utah has allowed debt to fall to around 20% to 30% of the Constitutional Debt Limit and reach as high as 87% in 2012.

In FY 2024, outstanding debt fell to 14.4% of the Constitutional Debt Limit, which constitutes at least a 35-year low in the relative debt levels of the State as determined by a percentage of allowable debt under the Constitution.

This conservative use of debt will allow the State to borrow strategically should it have a need to do so in the coming years.

Figure 8. Total GO Debt Outstanding and as a Percentage of Constitutional Debt Limit (End of Fiscal Year)



*The GO debt as a percentage of the Constitutional Debt Limit includes outstanding GO debt for FY 2025, including principal and premium of $1.2 B as of November 1, 2024. In the opinion of the state auditor, the State has other long-term liabilities consisting of unused vacation leave for employees of $153 million (FY 2024), which may be considered as GO debt of the State. For purposes of these calculations, this long-term liability is added to the GO debt outstanding when compared against the State's Constitutional Debt Limit.

Rainy Day Funds

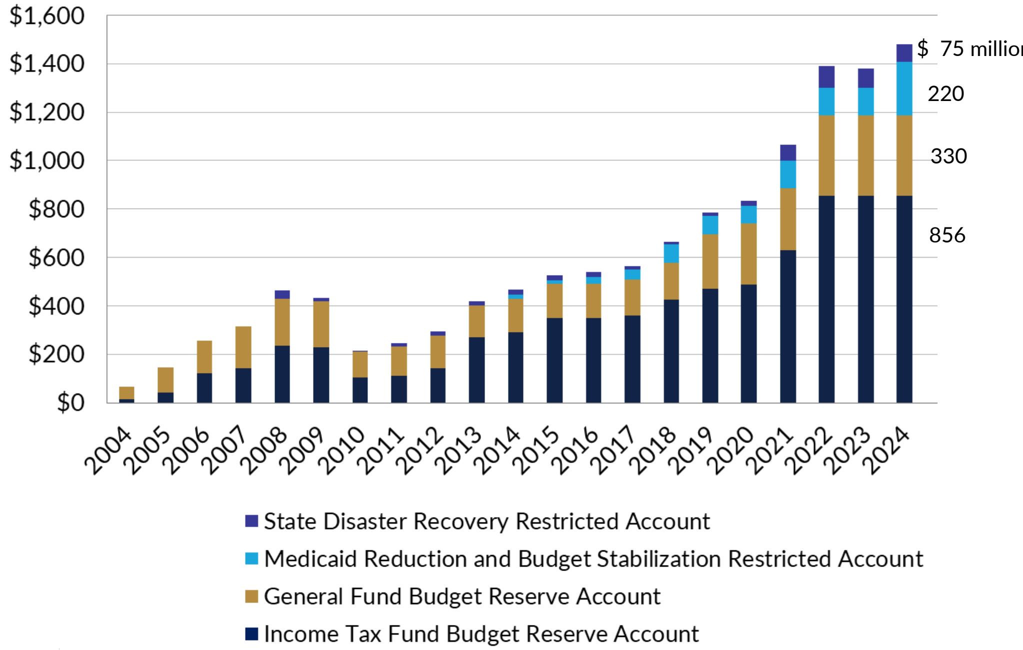
Prior to finalization of end of year balances in FY 2024, the State of Utah had $1.481 billion in total rainy day fund balances, with $330 million of balances in its General Fund Budget Reserve Account, $856 million of balances in its Income Tax Fund Budget Reserve Account, $220 million of balances in its Medicaid Reduction and Budget Stabilization Restricted Account and $75 million of balances in its State Disaster Recovery Restricted Account. The General Fund rainy day balance (gold bar in Figure 9) represents 6.2% of FY 2024 General Fund appropriations and the Income Tax Fund rainy day balance (black bar in Figure 9) represents 10.2% of FY 2024 Income Tax Fund appropriations.

HB51, Health and Human Services Funding Amendments, from the 2024 General Session moved the Medicaid Restrictive Account into the Medicaid Growth Reduction and Budget Stabilization Account and transferred $23.7 million into the stabilization account. The combination of the two accounts will likely result in significantly more transfers into and spending from the stabilization account in future years.

State Revenue[14]

State budgets across the nation continued to experience moderating revenue collections. Utah shared this moderating experience in FY 2024 but anticipates an uptick in growth rates beginning in FY 2025.

Figure 9. Utah Rainy Day Funds, Balances in Millions (End of Fiscal Year)



Source: Governor's Office of Planning and Budget

The extraordinary revenue growth in the years following the COVID-19 pandemic was underpinned by unprecedented federal fiscal stimulus, shifts in consumer behavior, pent-up demand for services, housing value increases, tight labor markets, and broad-based price increases throughout the economy.

Economic indicators suggest that the economy is returning to normal, with most of these variables already having returned, or well on their way to returning, to what would be expected given historical averages.

As seen in Table 3 on page 12, in FY 2024, unrestricted sales tax collections grew by 1.6% on a year-over basis, compared to 5.3% in FY 2023 and 18.0% in FY 2022. State forecasters anticipate sales tax will increase from the low FY 2024 growth rate closer to historical norms. Meanwhile, individual income tax decreased by 3.4% in FY 2024. This is partially due to the income tax rate cut enacted by the legislature in the 2023 General Session, and partially due to final payments of income taxes coming sharply down after pandemic surges.

Consensus estimates expect this source to resume growth in FY 2025. The corporate income tax grew by 1.6% in FY 2024, though forecasters expect to see a decline in FY 2025.

It is anticipated that the economy has largely normalized following pandemic disruptions and that revenue growth rates will begin to return to rates associated with a steadily growing economy.

Expected Future Debt

The Office of State Treasurer is not aware of any current legislative plans to authorize or increase debt in the near future.

Conclusion

Utah boasts a long history of robust and cooperative financial prudence, coupled with a commitment to budgetary restraint. Because of the State's conservative fiscal strategies, debt management, and other financial policies, Utah stands among only fifteen states to be rated AAA by the major credit rating agencies. This distinction enables the State to fund major projects with debt at the most favorable interest rates.

When compared with all other states, Utah is below national averages and medians for key debt metrics, including debt per capita, debt to personal income, and debt to state GDP. Compared to other AAA-states, Utah's debt levels are slightly higher than the median. Historically, Utah carried higher debt levels to support Utah's rapid growth and infrastructure development. However, robust state revenues and federal stimulus in recent years have allowed Utah to fund all critical infrastructure without the need to issue new debt.

The State's practice of issuing debt with short amortization schedules frees up significant debt capacity on an annual basis. This allows the State to take on sizable projects using debt with minimal impact to debt levels. Short debt amortization is looked upon favorably by rating agencies and credit analysts, which helps to keep Utah's cost of borrowing low and maintains flexibly to issue future debt. However, it can also impact budgets for ongoing programs supported by the State.

During the pandemic, the federal government provided stimulus to state and local governments, businesses, and individuals. This spending augmented tax revenues and enabled the State to pay cash to fund infrastructure that may have otherwise been funded with debt. However, the stimulus also contributed to the most rapid inflation our country has experienced in the last 40 years and resulted in increased infrastructure costs.

In recent years, Utah has paid down its debt, freeing up debt capacity should the need to borrow arise. However, now may not be the most advantageous time to borrow because: 1) interest rates, while declining, are still at relatively-high levels, 2) State revenues remain robust, and 3) labor markets are still relatively tight.

The Office of State Treasurer is not aware of any current legislative plans to authorize or increase debt in the near future.

The Office of State Treasurer encourages legislative and executive branch officials contemplating the authorization of new state debt to reach out and discuss these needs with the Office. Office staff are also available to address any questions pertaining to the State's credit rating and debt management.
